On February 3, 1989 I attended a meeting here in Las Vegas sponsored by the American Naturopathic Medical Association where I visited the booth of BHI. I was given a complimentary tube of Traumeel® ointment and had my name placed on your mailing list.

In June 1989 I was diagnosed as having non-insulin dependent diabetes, which I control with diet and walking. The Accu-Check II diabetic kit enables me to monitor my blood sugar levels twice daily. After each lancet puncture of the finger for the drop of blood, Traumeel® is applied along with a band-aid. This has been in effect since June 1989, during which time there has been no pain or sign of infection whatsoever at the innumerable sites of skin puncture.

Also, after each shampooing of the head, Traumeel® ointment has been applied to keratotic lesions on the scalp. These have healed and disappeared completely.

For these experiences, I would label Traumeel® ointment as **PRIMA!**

February, 1990*

For some time now I have intermittently received samples of your homeopathic products and have read the journal "Biological Therapy" with varying degrees of interest.

Two weeks ago my youngest son was involved in a bicycle accident and suffered abrasions and contusions to the left side of his face and nose. He also perforated his lower lip with his upper front teeth and bent the teeth back some 20 degrees from normal. Fortunately he had the presence of mind to push his front teeth back out again but the rest of his face and lower lip were badly traumatized.

He chose not to go to a hospital but came home instead for my personal attention. After cleaning off his face and giving him a mild analgesic I examined his nose and facial bones more carefully but could not elicit any evidence of fractures.

Remembering some of your articles on trauma care I chose to try your Traumeel® tablets (one every hour sublingually) and applied Traumeel® ointment as well to the areas of his face where the skin was not broken.

I could not believe the respon-

se. In 48 hours the edema and tissue contusions were almost gone. His lower lip with the large hematoma as well as the perforation was reduced 50 percent in size.

I expected that with the blow to his nose he would most likely have black eyes the next day but these symptoms never materialized.

One week after the accident his face was completely healed and even the punctured lower lip showed no evidence of permanent scarring.

I was thoroughly amazed in that in all my years of practice I had not seen such quick soft tissue recovery.

I felt that perhaps you would be interested in knowing the good results I had with your homeopathic product Traumeel®.
