Sinusitis

The following protocol is based on Dr. Bianchi's experience and cases from his medical practice in Verona, Italy.

Sinusitis is relatively straightforward to treat with homotoxic remedies. Whether it occurs as a secondary reaction due to cold or flu, or from bacterial infection, and becomes chronic due to toxicity induced by allopathic treatment or non-treatment, the remedies of choice are consistent.

The following remedies apply to:

<table>
<thead>
<tr>
<th>All types of sinusitis</th>
<th>Dropsy of the middle ear</th>
</tr>
</thead>
<tbody>
<tr>
<td>Catarrh of the ear passage</td>
<td>All types of rhinitis</td>
</tr>
</tbody>
</table>

**PRACTICAL PROTOCOL:**

**Basic Remedy**
- Euphorbiun Compositum Nasal Spray
- Endoteel

**Symptomatic Remedy**
- Traumeel

**PRESCRIBING DETAILS AND CLINICAL USE:**

**Traumeel:** The tablets can mediate the allergy mechanism and the inflammatory response associated with the allergic reaction and in this sense it can be used as maintenance therapy.

The saline-based solution (injectable Traumeel) can also be used as nose drops. According to Dr. Ivo Bianchi's protocol, 1 vial in each nostril every evening until improvement.

**Endoteel:** 1 vial in each nostril 3 times a week.

**Euphorbiun Compositum Nasal Spray**

Spray once or twice in each nostril 3-5 times a day.

(Some patients experience stomach ache when they use the nasal spray too often. If this occurs, reduce dosage frequency or discontinue use.)

**TOXIN-CLEARING REMEDIES:**

**Lymphomyosot** or **Lymphosot:** 15 drops morning and evening for two months.

**Graphites Homeaccord:** Constitutional remedy for deposition phase, specifically of the mesenchyme. 10 drops morning and night for one month.
