

USE OF VIBURCOL

VIBURCOL was developed for the treatment of agitation and restlessness in children.

Disturbances such as sleeplessness, crying, tantrums, etc. are attributed to many physiological conditions such as otitis and odontoneuralgia. Emotional states such as problems with siblings or classmates, family strife etc. can also provoke agitation and tantrums, especially in young children who are unable to express stress.

POSSIBLE CAUSES OF AGITATION WHEN PRESCRIBING VIBURCOL COULD BE USEFUL

- Viral infections (especially during the incubation phase)
- Otitis
- Pharyngitis
- Infections
- Food allergies or intolerances
- Teething

RESEARCH

In a drug monitoring study with 321 children, aged between 11 days and 12 years, the following conditions were treated with VIBURCOL with “good” to “very good” results in over 90% of the cases:

- | | |
|----------------------------|------------------------------|
| • respiratory infections | • stomach cramps |
| • flu | • restlessness |
| • otitis media | • sleeping disorders |
| • enteral infections | • hyperactivity |
| • urinary tract infections | • dermatological irritations |
| • teething problems | |

More than 10% of the study patients exhibited global improvement after just one dose of VIBURCOL. Within one week, approximately 80% of the children exhibited improvement.

GENERAL PROTOCOL WITH VIBURCOL:

For children over six months of age:

Acute condition (ex. Flu): 1 suppository every four hours until alleviation of symptoms. Then one suppository 2-3 times a day.

For infants up to six months of age: Insert one suppository (maximum of twice a day).

COMMENTS:

It is important to note that VIBURCOL does not reduce fever dramatically, rather, VIBURCOL allows for the gradual alleviation of the underlying condition, supporting soothing of symptoms and healing through the body's own defense mechanism.

PHARMACOLOGICAL NATURE OF INDIVIDUAL CONSTITUENTS:

CHAMOMILLA RECUTILA D1 (Chamomile)

Restless conditions, insomnia, catarrh conditions, glandular swellings, colic, otitis.

ATROPA BELLADONNA D2 (Deadly nightshade)

Febrile infections with inflammation of organs, cerebral irritation and inflammation of meninges.

SOLARUM DULCAMARA D4 (Bittersweet)

Eustachian and middle ear conditions.

PLANTAGO MAJOR D3 (Plantain)

Otitis media and pain in head region, enuresis nocturna, toothache, skin rashes, diarrhea.

PULSATILLA PRATENSIS D2 (Wild flower)

Inflammation of middle ear and organs, measles, mumps, headache, sleeplessness, nervous disturbances, mood swings.

CALCAREA CARBONICA D8

(Inner white part of oyster shell)

Tendency towards colds and flu, inflammation of respiratory passages, infantile facial eczema, glandular swellings, inflammation of the mucosa.

VIBURCOL

in ORTHODOX MEDICINE

VIBURCOL is a homeopathic compound medicine that can replace aspirin-type drugs, nonsteroidal anti-inflammatory drugs, antipyretic drugs and analgesics.

Available in certain countries under a new monodose format!
