

You can not see them but ...

...more life than ever!

ProBion® the smart tablet.

ProBion contains vigorous lactic acid bacteria embedded in the tablet's ingenious structure.

Lactic acid bacteria are natural and have developed in parallel with human beings from the very beginning.

80% of the immune system is related to the intestinal flora.

This implies that most animals, including human beings, benefit from a healthy intestinal flora.

They represent the foundation for the vitality that conditions your stomach and digestion to work at its optimal level.

Supplementation of lactic acid bacteria is often more necessary than vitamin and mineral supplementation for your wellbeing.

The ProBion® tablet with its ingenious structure

ProBion® – the dry tablet has superior quality and shelf-life.

The tablets are 50-100 times drier than capsules. This adds to its unique integrity. The bacteria are chosen to be resistant to bile and gastric acids. They are additionally protected in the tablet by

mucus forming protective molecules. In each tablet, together with the bacteria, there are food packages with

FOS = fructooligosaccharides and

FPS = fructopolysaccharides.

This helps the bacteria perform at their optimum level.

How ProBion® works.

The tablet contains wholesome and vital lactic acid bacteria and metabolic vegetable fibres called Inulin. They promote an environment where the healthy intestinal flora thrives. They reinforce normal bodily functions. A healthy intestinal flora **improves the absorption of vitamins and minerals.**

You may take ProBion® both for temporary periods in life and for continuous use. Regular use could be compared with **brushing your teeth!** You will do it every day as a matter of habit.

Begin with one tablet daily. We all react differently, but most of us will do with one or two tablets per day. Some need to take somewhat more and in special circumstances when the intestinal flora have been distressed i.e.: Through **illness, travelling, antibiotics or other medical drugs, poor diet or polluted air,** there is a need for maybe 3 tablets 4 times daily during those periods.

One Pot of ProBion® will normally last 75-150 days if you take 1-2 tablets daily.

Deposition effect gives Prolonged Probiotic Performance.

The tablet dissolves in a controlled manner little by little, because the wholesome bacteria are protected by the **tablet's ingenious structure**. The dissolution time is 150 minutes with an additional deposition effect that **prolongs and reinforces the performance** of the bacteria. This makes the bacteria perform to an optimal capability in both the small intestine and in the colon.

Tablets present the bacteria with optimal vitality over a time period lasting **5-10 times longer and over a larger intestinal area** compared to capsules. Capsules dissolve in 10-30 minutes, which renders the small amount of vital bacteria remaining in them even less effective.

ProBion® versus capsules with probiotics.

ProBion® dissolves little by little, which makes the optimally vital lactic acid bacteria perform for a longer period in the intestine with vigour.

Quality controlled by independent laboratories.

Quality analyses by independent laboratories give a reliable guarantee. ProBion® specifies the lowest amount of bacteria **stored at room temperature** at the best before date, which is 24 months after production. **You know what you get!** Most products state only the amount of bacteria at the production date! They seldom mention shelf-life and never the lowest amount guaranteed. If you take 1 tablet of ProBion® daily twice a day you will get more than 8 billion vigorous bacteria.

ProBion® contains controlled balanced lactic acid bacterial strains for **different digestive situations**. They are clinically chosen by Swedish Scientists to comply with different individuals. That is why you can choose **ProBion® active** for a loose or rapid motility, **ProBion® basic** for the constipated or slow digestive tract and **ProBion® daily** for mostly all other Digestive situations. This means you can adapt your supplement individually and for different situations or occasions in life. You will get the best effect if you take ProBion® regularly!

The strains are carefully chosen to harmonise with each other and fit most people's digestive habits irrespective of age and sex.

ProBion® is free from soya- and milk protein and lactose.

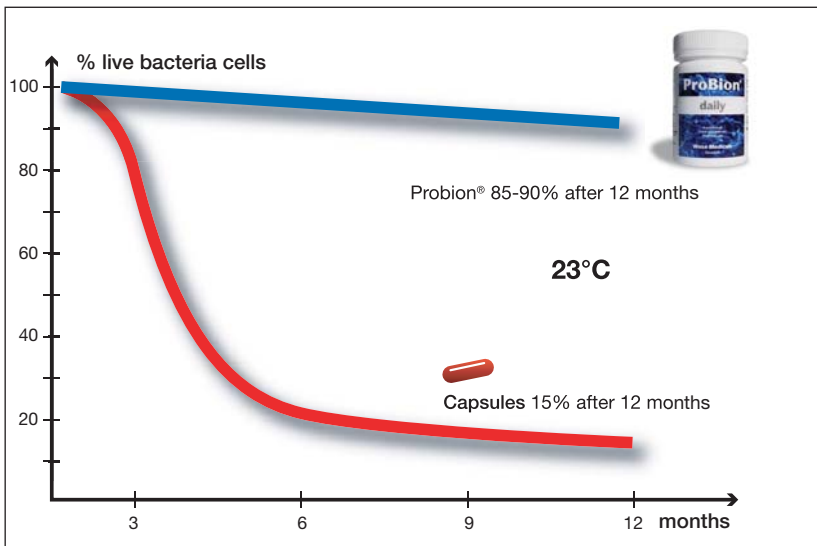

ProBion® - the smart bacteria, the dry tablet and the safe choice!

- INDIVIDUAL** Clinically developed by Swedish Scientists, to comply with different people's flora, irrespectively of age or sex. You can choose the product that suits you!
- PATENT** ProBion® represents quality and innovation with a patented production technique.
- GUARANTEE** Quality is assured by **independent laboratories** to give you a guarantee of the lowest amount bacteria at best before date.
- SHELF-LIFE** ProBion® is easy to carry with you, as the dry tablet has a superior **24 months shelf-life even in room temperature**. You do not need take the fridge with you!
- RELIABLE AND SAFE** Easy to use as you will get the **correct amount** wholesome bacteria the whole time!
- DEPOSITION EFFECT** ProBion® has **Prolonged Probiotic Performance** for optimal effect

ProBion® has and retains 5 times more vitality than encapsulated probiotics.

After 12 months at room temperature ProBion® has more than 80% live bacteria left. Compare this to capsules that have, at the most, less than 20% left. This is the equivalent of buying a car with 150 horsepower only to find when you drive it that it has just 20 horsepower!

Retained vitality in the dry ProBion tablet versus wet capsules. Vitality is defined as Live/Dead ratio in %.

Wasa Medicals represents quality and innovation with their **patented production technique** valid in many countries in the world. Individually adapted products with more than 25 years clinical experience amongst therapists and satisfied and contented clients.

ProBion® contains bacterial strains that are well documented and **stable for storage at room temperature**. The strains chosen are found in more than 50% of the U.S. market for probiotic food supplements.

Wasa Medicals only quotes the minimum amount of bacteria left in the product at the best before date and not the amount of bacteria present at the date of manufacture as with other probiotic food supplements.
