

HAUSMITTEILUNG

EINGEGANGEN 10. Okt. 1995

an: Herm Min
von: Dr. Reinhart

Therapieanfrage aus England - Ihre Hausmitteilung vom 22.09.95

Folgende Behandlung schlagen wir für die beiden genannten Krankheiten bei Hunden vor:

1. Distemper (Staupe)

a) respiratory form:

Engystol + Gripp-Heel + Echinacea compositum forte

In bronchitis: additionally Bronchalis-Heel tablets

in highly acute inflammations of mouth, tonsillitis, bronchopneumonia: Belladonna-Homaccord

b) digestive form:

food withdrawal, substitute fluid losses:

Traumeel + Engystol + Mucosa compositum as routine therapy

in cases of strong diarrhoea: Nux vomica-Homaccord and Veratrum-Homaccord

Spascupreel in intestinal spasms

finally for regeneration of mucosa: Mucosa compositum

c) nervous form:

Engystol + Belladonna-Homaccord + Apis-Homaccord + Traumeel as routine therapy

in cramps or ticks: Spascupreel

after actual disease: Cerebrum compositum + Placenta compositum + Neuro-Injeel

In prolonged cases use Cralonin for support of heart and circulation.

2. Parvovirus

a) initially:

often allopathic initial treatment necessary (e. g. antibiotics, steroids, substitution of fluid losses)

additionally and for the following treatments exclusively: Engystol + Traumeel + Mucosa compositum

b) manifest intestinal symptoms (diarrhoea, vomitus):

add Vomitusheel (drops or suppositories)

possible single remedies: nervous, frightened animals: Phosphor-Injeel forte

meteorism: Carbo vegetabilis-Injeel forte

black diarrhoea: Acidum formicicum-Injeel forte

c) In heavy cases add Coenzyme compositum

Treatment after actual disease: Cralonin for three weeks.
